

## Press release

# Install office software from Open-Xchange with just a few clicks

## OXText new in the Univention App Center

**In addition to the communication and collaboration software OX App Suite, the text editor OXText from Open-Xchange is now also available in the Univention App Center. Both applications can be installed with just a few clicks and automatically integrated in UCS' central user and service management.**

**Bremen, Nuremberg, 29<sup>th</sup> April 2014.** OX App Suite offers users a browser-based web desktop with which they can edit their e-mails, address books and appointments and manage image, audio, video and Office files in one central application. The text editor OXText complements the range of functions with the possibility of editing Microsoft Word and OpenOffice/LibreOffice files directly in the browser. As OXText only saves the changes and not the complete document, the formatting and layout of the original document are preserved completely. This innovation is a fundamental requirement for successful cooperation with employees, business partners and friends who wish to continue using their respective desktop office software. OXText also allows the shared editing of documents. As the write access switches between participants, the changes made by all the participants are displayed in the browser immediately.

Peter Ganten, Managing Director of Univention, sees in OXText a particularly practical addition to the wide range of enterprise apps available in the Univention App Center: "Until now, being able to edit documents online in a browser required the documents to be saved on clouds offered by providers such as Google and Microsoft. With OXText, UCS users now have the same function available to them and still retain complete control of their data. That's the future for many organisations."

"Univention Corporate Server is our recommended operating system platform for companies, authorities and educational institutions who want to operate OX App Suite and manage it themselves – either in their own computer centre or on a private cloud operated by a service provider", explained Rafael Laguna, CEO of Open-Xchange.

As it is also possible to administrate several servers at different sites centrally with UCS, UCS is also suitable for migrating companies' internal Open-Xchange installations to private clouds or when changing cloud providers. In this way, UCS ensures that organisations retain complete

control over their IT when using cloud-based services.

### **Test version ready for use with just a few clicks of the mouse**

Interested parties can find a free installation image of UCS at:

<http://www.univention.com/products/ucs/univention-app-center/app/details/open-xchange-text>.

OX App Suite and OXText can be installed for up to five users from its App Center in just a few steps.

### **About Univention**

Univention is a leading European provider of Open Source products for the cost-efficient operation and effective administration of IT infrastructures. At the heart of our offer is the Linux infrastructure solution Univention Corporate Server (UCS). UCS is a modern enterprise Linux distribution with an integrated Open Source solution for identity and infrastructure management, which makes efficient, centrally controlled administration possible even in challenging environments. The core product UCS is complemented with, among other things, products building on it for the cross-platform administration of thin clients, support of Linux desktops and an integrated virtualization solution. Thanks to the supplied connectors, the products are ideal for use with for example the Microsoft Active Directory, integrate perfectly in existing infrastructures and allow simple migration. A large number of software producers offer optimised packages for operation with UCS, which can be integrated in the UCS management system among other things. UCS is thus the Open Source integration platform for IT infrastructure operation and management.

### **About Open-Xchange**

Open-Xchange has been delivering innovative and cost-efficient collaboration software on an Open Source basis for more than a decade. The company is a pioneer in the field of software as a service (SaaS) and distributes its software via cloud service providers, hosting and telecommunication providers and system integrators. Open-Xchange develops at its sites in Olpe and Nuremberg, Germany, and also has an office in San Jose, California, USA. For more information, please visit <http://www.open-xchange.de>
