Extending the Digital Reach Flood of Open Education Resources Challenges Districts seek curation tools for organization

Complete Coverage ▶

By Michele Molnar

With millions of pieces of open education resources flooding the Internet, educators face a "needle in the haystack" problem of epic proportions.

Sure, they can find hundreds, if not thousands, of free pieces of content to accomplish their mission with students, but how to find the right one, aligned to the right standard, for the right student, at the right time? That challenge lies at the heart of personalized learning, whether conveyed through teachers, technology, or some combination of the two.

The Houston schools confronted that issue in the rollout of **PowerUp**, the district's 1-to-1 digital learning initiative for its 215,000 students.
