

Nubus

SECURE. SEAMLESS. SCALABLE.

One login, secure access – our central Identity & Access Management platform brings together all your applications, services, digital identities, and access rights in a single, user-friendly portal. Operate securely, fully compliant with German IT security standards (BSI).

 **nubus**

Modular Identity & Access Management

All your apps, one login, maximum security

Nubus is a powerful IAM solution that provides access to applications via Single Sign-On and manages accounts and permissions through one central portal. Being fully Open Source, Nubus offers complete transparency. Plus, with Univention, you get reliable support, maintenance, and project assistance. Whether you're using it in the cloud, on-premises, or a hybrid setup, Nubus is designed to fit your needs.

Your organization is growing – and so is the number of applications and services you rely on. At the same time, **protecting sensitive data** and giving your teams quick access to the right tools is more important than ever. But with every new tool comes more complexity – multiple accounts, varying permissions, countless passwords, and ever-increasing security demands. The administrative workload increases, and the ecosystem of applications becomes more tangled. Add to that the shortage of skilled staff and inefficient systems, and things quickly get overwhelming. Sounds familiar?

That's where Nubus comes in. It simplifies everything by serving as a **central hub** for your identity and access management. Nubus provides a secure, seamless, and scalable solution that lightens the load for your IT teams and makes it easier for users to access all the apps they need. With **Single Sign-on** and handy **self-service features**, your employees can log in once and gain instant access—no IT support required.

- » Web portal with SSO & self-service features
- » Identity & Access Management (IAM)
- » Integrations & APIs
- » Secure & scalable
- » Open Source
- » Support, maintenance & project assistance

BENEFITS & COMMON USE CASES

One Portal, One Login, Total Control

Access All IT Services in One Place

Through our user-friendly web portal, administrators and users get fast and secure access to all connected applications and management tools – all in one central place.

Nubus combines Identity & Access Management with an intuitive web portal, creating a **central hub** for all IT services. Whether on an internal network or online, users sign in once with **Single Sign-on** (SSO) and instantly access all their applications. Nubus goes beyond secure access – it puts users in control with self-service tools that eliminate unnecessary IT requests. Need a password reset? A profile update? Users handle it themselves, anytime. Administrators stay in charge, deciding who can self-register and which self-service options are available.

Admins get direct access to the **IAM web interface**, making it easy to configure user permissions and manage

who can access which applications. Need to tailor content for specific groups? No problem – custom settings allow for a personalized experience while keeping everything secure and organized.

The Nubus portal isn't just functional – it's fully adaptable. Admins can customize layouts, content, and branding to fit their organization's needs. Whether using **drag-and-drop tools in Visual Composer** or **automating through APIs**, every detail is adjustable. Add custom stylesheets, background images, tile icons, and links to other IT services. Create a seamless, branded experience!

- » Access anytime, anywhere
- » One login, access to all services
- » Personalized content based on permissions
- » Deploy on-premises or in a private cloud
- » Customizable design & branding

- » Centralized management of accounts and groups
- » Identity lifecycle management
- » Preconfigured roles and permission models
- » Flexible REST API for easy system integration
- » Ready-to-use integration packages for applications and web services

Identity & Access Management

Fast, Secure, Hassle-Free Access

With Nubus, user accounts, groups, and permissions are all managed in one place – effortless, organized, and built for efficiency.

Nubus makes managing users and groups easier by keeping all essential account data in one place. From creating new accounts to securely deactivating them, it covers the **entire identity lifecycle**. Predefined roles and permission models speed up access management, ensuring that users only have access to the resources they actually need.

With its flexible REST API, Nubus seamlessly connects to other systems, ma-

king integration into your existing IT environment hassle-free. Need a faster way to onboard applications? Nubus offers ready-to-use **integration packages** for a wide range of tools, including collaboration platforms, communication services, and other digital applications. These prebuilt solutions simplify the process, allowing you to expand your IT infrastructure quickly and efficiently – without unnecessary complexity.

Packaged integrations and APIs for applications

Seamless Connection to Third-party Applications

With Nubus, you can integrate external applications effortlessly using open standards and prebuilt packages. You get full support throughout the software lifecycle to keep your infrastructure up to date.

Nubus supports widely used standards like **OIDC, SAML, LDAP, and REST**, allowing administrators to connect applications quickly and securely – without complex configurations. This saves time and ensures seamless integration into existing IT environments.

Nubus supports you through the entire **software lifecycle** – from development and integration to deployment, maintenance, and updates. With the right tools and processes at your fingertips, you can take full control and

manage everything in-house. No vendor lock-in, no unnecessary complexity – just a flexible solution that keeps your infrastructure up to date and running smoothly.

Nubus offers **ready-to-use integration packages** for popular applications like Open-Xchange and Nextcloud – these work out of the box. Our preconfigured solutions eliminate the hassle of complex setups, allowing administrators to connect services quickly and effortlessly.

- » Integration via open standards and APIs
- » Full support throughout the software lifecycle
- » Preconfigured integration packages for popular applications

Benefits & Key Use Cases

For End Users & IT Administrators

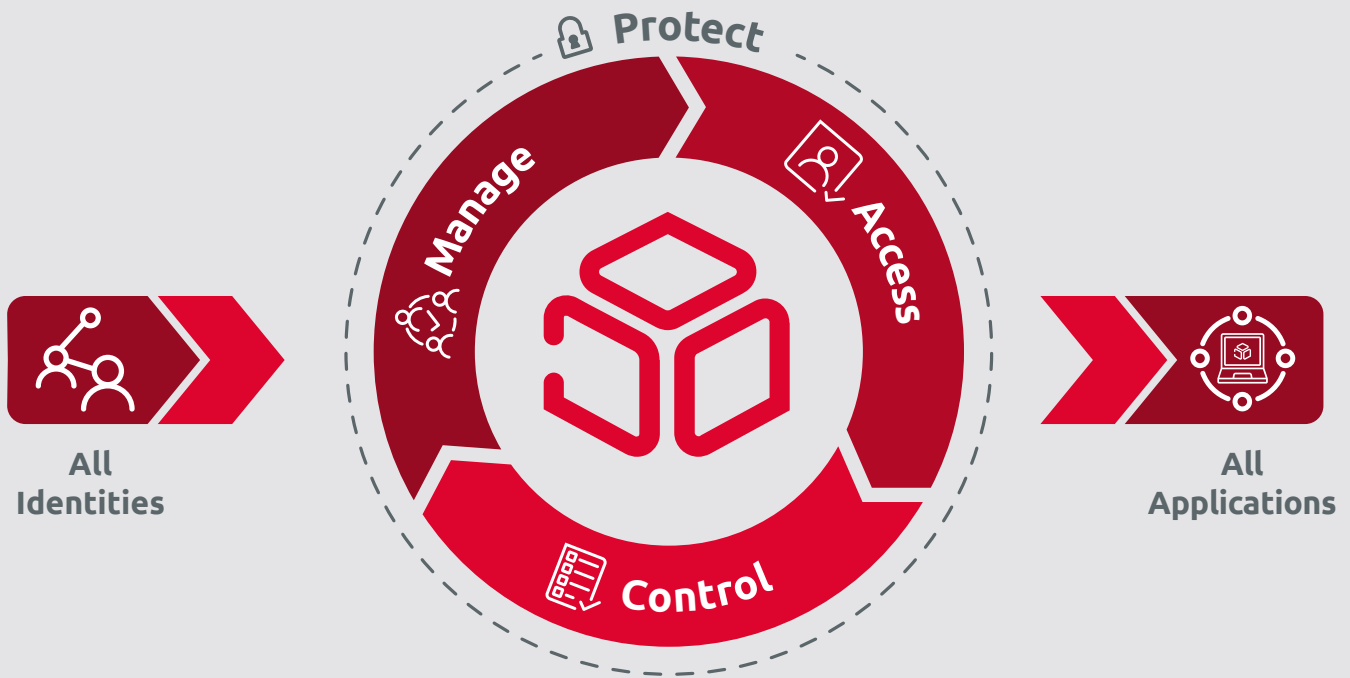

Easy, secure access with full support from the manufacturer.

Nubus delivers a **unified user experience** with one login for all applications. Users then get seamless access to all their applications – no extra logins, no wasted time. The intuitive interface makes navigation effortless, so everything they need is just a click away. Self-service tools let users reset passwords and update their profiles on their own, eliminating unnecessary IT requests. The result? A smoother, more efficient workflow where users stay productive, and IT teams can focus on what really matters.

Admins manage user accounts and permissions from a single platform – saving time and minimizing errors. Preconfigured integrations and standardized APIs simplify the connection of new applications. Plus, Nubus is designed to meet **BSI security standards**, with detailed documentation to support certification. A reliable, secure solution that keeps IT operations efficient and future-proof.

With Nubus, there's no need to worry about updates, patches, or long-term

upkeep – everything is managed directly by the manufacturer. Unlike self-built solutions, Nubus provides **continuous improvements**, expert support, and **long-term reliability**. As an Open Source platform, it ensures full transparency while keeping your system secure, up to date, and always running smoothly.

Where Nubus Fits Best

In-House-IT:

Ideal for organizations looking to centralize identity management and unify applications in a user-friendly environment. Nubus also acts as a bridge between existing systems and modern application landscapes, ensuring smooth transitions and integrations.

SaaS Providers & Data Centers:

Seamlessly integrates with external IAM systems, enabling hybrid and cloud-based solutions. With a single access point, businesses can provide customers with a secure, unified login experience across multiple applications.

About Univention

We Make Digital Sovereignty Real

Headquartered in Bremen, Univention delivers open source solutions for efficiently managing digital identities and integrating applications. Our products focus on openness, scalability, and ease of use, ensuring that organizations retain digital sovereignty – complete control over their data and identities, while maintaining the flexibility to design and manage their own IT landscapes.

Nubus is our all-in-one Identity & Access Management solution, complete with a user-friendly web portal that gives you quick access to applications and effortlessly integrates them using standardized interfaces and ready-made integration packages. **Univention Corporate Server (UCS)** is our open integration platform, incorporating Nubus and an App Center for centralized management of diverse IT

environments. UCS can be deployed as a software appliance in your data center or hosted in the cloud.

For the education sector, we offer **UCS@school**, a tailored solution designed to meet the unique needs of school authorities. It simplifies the delivery of services like learning management systems, email, cloud, and office applications, all through dedicated school portals. Users can be automatically imported from state directories and centrally managed.

Our solutions are trusted by a wide range of state governments, municipalities, counties, public administrations, and enterprises across the DACH region.
